Read the Text and answer the following questions.

1. Find a word in paragraph 1-3 that has a similar meaning to “combination”.

Blend

2. Find a word in paragraph 3-5 that has a similar meaning to “regularly”.

Routinely

3. According to Paragraph 3-5, are the following statements True (T), False (F) or Not Given (NG)?

(i) The Pew survey indicated that roughly half of professional writers use AI tools for content generation.

T F NG

(ii) Marcus Wheeler believes his natural writing is more effective than AI-generated content.

4. Complete the following sentence based on information given in Paragraph 6-8. Write **ONE** word in each blank.

X

AI language models have learned to find a statistical middle path, creating a “Goldilocks zone of blandness”. This problem intensifies as humans start internalizing these patterns, leading writers to unconsciously cater their style to the AI. As a result, university professors are observing increasingly homogeneous writing from students.

5. What does the observation that “Sometimes I’m not talking to the guy; I’m talking to his bot” suggest about the nature of online communication?

- A. It is becoming more efficient and streamlined.
- B. It fosters deeper and more authentic connections.
- C. It encourages greater human creativity in language.
- D. It risks becoming an interaction with algorithms rather than people.

6. When the article states, “We’re losing linguistic diversity,” what is the implied consequence for human expression?

- A. People will become more adept at nuanced communication.
- B. The range of human emotions conveyable through language will expand.
- C. The richness and variety of ways humans express themselves will diminish.
- D. Communication will become more precise and lower the chance of misinterpretation.

7. Complete the following sentence based on information given in Paragraph 12-14. Write ONE word in each blank.

The AI revolution rapidly alters who is crafting messages, threatening “linguistic fingerprints”. This outsourcing of expression to algorithms results in the loss of deeper cultural knowledge

8. What does the word “these” in Paragraph 13 refer to?

Speaking with patterns as unique fingerprints patterns.

9. According to Paragraph 12-14, are the following statements True (T), False (F) or Not Given (NG)?

(i) AI revolutionizes language by fundamentally changing who performs the crafting of messages.

T F NG

(ii) AI-mediated communication is designed to preserve cultural knowledge and community identity.

10. What does the emergence of “AI-illegible” writing styles primarily suggest about human response to language flattening?

- A. People are unwillingly accepting the inevitable dominance of AI in communication.
- B. Writers are actively seeking ways to differentiate human creativity from algorithmic outputs.
- C. The literary community is trying to integrate AI tools effectively into creative processes.
- D. There is a general decline in the quality of human writing when compared to AI.

Read the Text and answer the following questions.

4. Complete the following sentence based on information given in Paragraph 6-8. Write **ONE** word in each blank.

X

AI language models have programmed to find a statistical middle path, creating a “Goldilocks zone of blandness”. This problem intensifies as humans start internallyizing these patterns, leading writers to unconsciously cater their style to the AI. As a result, university professors are observing increasingly homogeneous writing from students.

5. What does the observation that “Sometimes I’m not talking to the guy; I’m talking to his bot” suggest about the nature of online communication?

- A. It is becoming more efficient and streamlined.
- B. It fosters deeper and more authentic connections.
- C. It encourages greater human creativity in language.
- D. It risks becoming an interaction with algorithms rather than people.

6. When the article states, “We’re losing linguistic diversity,” what is the implied consequence for human expression?

- A. People will become more adept at nuanced communication.
- B. The range of human emotions conveyable through language will expand.
- C. The richness and variety of ways humans express themselves will diminish.
- D. Communication will become more precise and lower the chance of misinterpretation.

7. Complete the following sentence based on information given in Paragraph 12-14. Write ONE word in each blank.

The AI revolution rapidly alters who is craffing messages, threatening “linguistic fingerprints”. This outsourcing of expression to algorithms results in the loss of deeper cultural meanings.

8. What does the word “these” in Paragraph 13 refer to?

Every person's speech

9. According to Paragraph 12-14, are the following statements True (T), False (F) or Not Given (NG)?

(i) AI revolutionizes language by fundamentally changing who performs the crafting of messages.

T F NG

(ii) AI-mediated communication is designed to preserve cultural knowledge and community identity.

 X

10. What does the emergence of “AI-illegible” writing styles primarily suggest about human response to language flattening?

- A. People are unwillingly accepting the inevitable dominance of AI in communication.
- B. Writers are actively seeking ways to differentiate human creativity from algorithmic outputs.
